Annual Weather Report 2010

DD Sahu, MC Chopada, VD Khanpara and BV Parmar

**AGROMETEOROLOGICAL CELL
DEPARTMENT OF AGRONOMY
COLLEGE OF AGRICULTURE
JUNAGADH AGRICULTURAL UNIVERSITY
JUNAGADH – 362 001.**

Preface

Crop yield is the function of many factors like weather, soil type its nutrient and water management. Of these weather plays an important role. Yield of a crop depends on the weather conditions during a season. In all agricultural research stations agro-meteorological observations are recorded from the observatories to study the crop weather relationship.

The annual weather report has been published by this department since 2000 every year using observed weather data at the observatory located at agronomy research farm. The report carries daily, weekly, monthly, seasonal and annual weather data pertaining to all weather parameters, number of hot and cold days during summer and winter seasons for last 25 years are also presented in this report.

I am thankful to Shri H.L. Kacha SRF for his help in compilation and computerization of this report. This will be useful for all the research scientists and post graduate students for interpretation of weather conditions during their field experiments. This compilation is appreciated for easy availability of weather data for all users.

1	Daily rainfall at Junagadh-2010	3
2A & B	Weekly weather data at Junagadh-2010	5
2 C	Normal weekly weather data at Junagadh	7
3 A &B	Monthly weather data at Junagadh-2010	8
4	Seasonal weather data at Junagadh-2009-10	9
5	Number of hot days during summer	11
6	Number of cold days during winter	12
7	Mean maximum and highest maximum temperature at Junagadh	13
8	Mean minimum and lowest minimum temperature at Junagadh	14
9	Decadal rainfall (1960-2010) at Junagadh	15
10	Daily weather data from January to December-2010	16

Introduction

Weather during crop seasons strongly influences the crop growth and development. The variation in crop productivity is mainly due to weather fluctuations. Weather and climate are the important factors determining the growth, development and yield of crops. Weather influences the agricultural operations and experimental treatments from sowing of a crop to the harvest and storage. Crop yields are the integrated result of external and internal processes that occur during the crop growing period. The external environment is the climate which regulates and the weather determines the growth and development and finally the yield of the crop. It is therefore, that the meteorological parameters are recorded in all agricultural experimental stations. The interpretation of experimental results in the light of weather conditions prevailing during the period of crop growth is essential. Weather observations are also necessary for accurate weather forecasting and comparison of forecasted weather.

In view of the above the weather parameters recorded at the Agro meteorological observatory, Department of Agronomy, Junagadh Agricultural University, Junagadh from 1st January 2010 to 31st December 2010 are analyzed and presented in this report.

Methodology

The daily, weekly, monthly, seasonal and annual weather data are presented using all statistical parameters viz. mean, SD, coefficient of variation, mode, lowest and highest values. The year is divided into four seasons viz. winter (December to February), summer (March to May), monsoon season (June to September) and post monsoon (October and November).

Summary

The variation and distribution of all weather parameters viz. rainfall, temperature, relative humidity, wind speed and direction, bright sunshine hours, evaporation, and cloud cover etc are discussed below.

1. Rainfall and rainy days

A total amount of 1690.7 mm rainfall was received in 71 rainy days during the year 2010. During the monsoon from June to September 1558.0 mm rainfall was received in 64 rainy days, which is the highest rainy days since 1957. The rains commenced from 3rd June,

two weeks earlier than the normal onset of monsoon and withdrew from 13th September; however, there was an unseasonable rainfall of 131.7 mm during October-November.

2. Maximum temperature

The highest maximum temperature of 44.5 °C was recorded on 21st May-2010. May was the warmest month with a mean maximum temperature of 41.2 °C.

3. Minimum Temperature

The lowest minimum temperature of 7.4 °C was recorded on 11th December-2010. Mean minimum temperature of December was 11.9 °C.

Annual average of weather parameter during 2008

Total rainfall (rainy days)	:	1690.7 (71)
Maximum temperature	:	44.5 °C (21/05/2010)
Minimum temperature	:	7.4 °C (11/12/2010)
Wind speed (km/hr)	:	5.6 kmph
Evaporation (mm)	:	5.5 mm
Bright sunshine (hrs)	:	6.8 hr/day
Onset of monsoon	:	3 rd June, 2010
Withdrawal of monsoon	:	13 th September, 2010
