## PREFACE

*Crop yield is the function of many factors like weather, soil fertility and water management. Of these, weather plays an important role. Yield of a crop depends on the weather conditions during a season. At all Agricultural Research Stations Agro-meteorological observations are recorded from the observatories to study the crop weather relationship.*

*The Annual Weather Report has been published by this department every year using observed weather data at the observatory located at Instructional Farm. The report carries daily, weekly, monthly, seasonal and annual weather data pertaining to all parameters like air and soil temperatures, rainfall, relative humidity, wind speed, wind direction, bright sunshine hour and evaporation. The bulletin also contains the frequency of hot days during summer, cold days during winter, cloudy days and rainy days during monsoon seasons for last 32 years (1985-2016) which is very useful for climate variability study.*

*This type of Annual Weather Report should be published at all Research Stations using their respective observatory data which will be useful for future studies. This will be useful for all the research scientists and post graduate students for interpretation of weather conditions during their field experiments. This compilation is appreciated for easy availability of weather data for all us*

# CONTENTS

<b>Table No.</b>	<b>Title</b>	<b>Page</b>
	Introduction, Methodology and Summary	1
1	Daily rainfall at Junagadh	3
2 (A/B)	Weekly mean weather data	5
2 (C)	Weekly normal weather data (1965-2014)	7
3 (A/B)	Monthly mean weather data	8
4(A/B/C/D)	Seasonal weather conditions	9
5	Frequency of cloud days, rainy days and amount of rainfall	11
6	Number of hot days in summer season	12
7	Number of cold days in winter season	13
8	Mean minimum and lowest minimum temperature during winter season	14
9	Mean maximum and highest maximum temperature during summer season	15
10	Decadal rainfall at Junagadh (1961-2010)	16
	Appendix-1-Daily weather data	17
	Appendix-2- Standard meteorological periods and weeks	42

## INTRODUCTION

Weather conditions during crop seasons strongly influence the crop growth and development. The variation in crop productivity is mainly due to weather fluctuations. Weather and climate are the important factors determining the growth, development and yield of crops. Weather conditions affect the agricultural operations and experimental treatments also. Crop yields are the integrated result of external and internal processes that occur during the crop growing period. The external environment is the climate which regulates and the weather determines the growth and development and finally the yield of the crop. It is therefore; necessary to measure the meteorological parameters in all agricultural experimental stations. The interpretation of experimental results in the light of weather conditions prevailing during the period of crop growth is important. Weather observations are also required for accurate weather forecasting and comparison of forecasted weather.

In view of the above the weather parameters recorded at the Agro meteorological observatory, Department of Agronomy, Junagadh Agricultural University, Junagadh from 1<sup>st</sup> January 2016 to 31<sup>st</sup> December 2016 are analysed and presented in this report.

## METHODOLOGY

The daily, weekly, monthly, seasonal and annual weather data are presented along with the entire statistical parameters viz. mean, standard deviation, coefficient of variation, lowest and highest values. The year is divided into four seasons viz. winter (December to February), summer (March to May), monsoon (June to September) and post monsoon (October and November).

The hot days, cold days, cloudy days and rainy days for last 32 years (1985-2016) are also presented in this report.

- A **hot day** is a day with maximum temperature 40 °C or more than 40 °C.
- A **cold day** is a day with minimum temperature 10 °C or less than 10 °C.
- A **rainy day** is a day receiving a 2.5 mm of rainfall or more.
- A **cloudy day** is a day with less than 2.0 hours bright sunshine hours.

## **SUMMARY**

The variation and distribution of all-weather parameters viz. rainfall, temperature, wind speed, bright sunshine hours and evaporation are discussed below.

### **1. Rainfall and rainy days**

An annual rainfall of 1125.1 mm was received in 45 rainy days. Whereas, monsoon rainfall of 972 mm was received in 41 rainy days during the year 2016. The rain commenced from 20<sup>th</sup> June at normal onset of monsoon and withdrew from 8<sup>th</sup> October 2016.

### **2. Maximum temperature**

The highest maximum temperature of 45.5 °C was recorded on 19<sup>th</sup> May-2016.

### **3. Minimum Temperature**

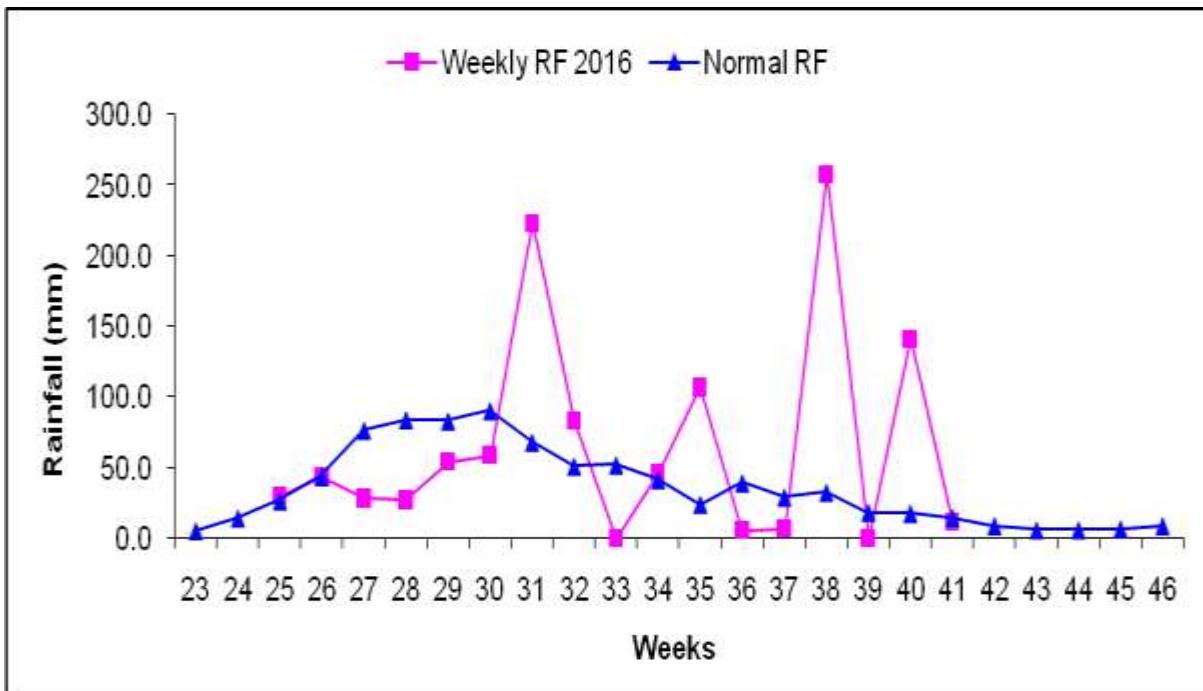

The lowest minimum temperature of 7.0 °C was recorded on 22<sup>th</sup> January-2016.

## **Summary of weather parameter during 2016**

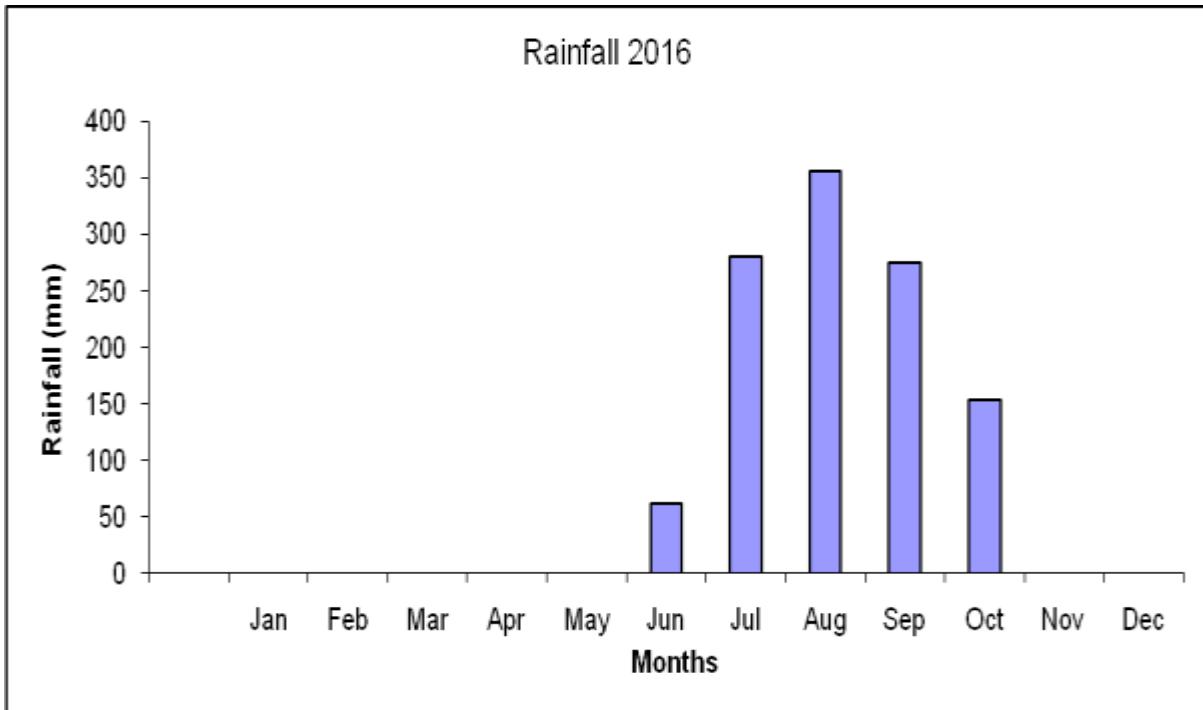

Annual rainfall (mm) (rainy days)	:	1125 (45)
Seasonal rainfall (mm) (rainy days)	:	972 (41)
Onset of monsoon	:	20 <sup>th</sup> June, 2016
Withdrawal of monsoon	:	8 <sup>th</sup> October, 2016
Maximum temperature	:	45.5 °C (19/05/2016)
Minimum temperature	:	7.0 °C (22/01/2016)
Wind speed (km/hr)	:	5.4
Evaporation (mm/day)	:	5.6
Bright sunshine (hr/day)	:	6.2
