ABSTRACT

The present study was conducted in broiler rabbits to evaluate the effects of dietary supplementation to 30 rabbits at the age of 2 8 if Thus, each treatment consists were randomly and equally allotted treatments were: 1 as a control (Sasal diet). The dietary treatments were randomly and equally allotted treatments were: 1 as a control (Sasal diet). 12 (Gasal diet + 0.5 g problements) and 13 (Basal diet + 10.5 g problements and 13 (Basal diet + 10.5 g problements and 13 (Basal diet + 10.5 g problements were the control of the week was the highest in T2 (116.1) with mean showed that the return over feed control of the week was the highest in T2 (116.1) with mean showed that the return over feed one (106.12) and T3 (48.79). Average weekly cost (Rs.) of feeding in 12 (53.85) (Glowed by T3 (135.61) and T3 (48.79). Average weekly cost (Rs.) of feeding in 12 (53.85) (Glowed by T3 (135.61) and T3 (48.79). Average weekly cost (Rs.) of feeding in the substance of the world including India. Rabbit farming is an important emerging enterprise in many countries of the world including India.
